

Vitalises electro-smog!

Nature emits electrical waves and magnetism. Out of this, humans create electromagnetism, with a great deal of electro-smog. That is unpleasant for our body's cells.

Many people are electro-sensitive. However, many first notice the influences too late, perhaps not until the time when problems arise. Your ear becomes hot when you are on the phone, a headache appears, fatigue creeps in. The effects of electro-smog are sufficiently scientifically documented. Whether in the form of mobile phones, computer screens, lamps, sockets or switches in the bedroom. Every day, electro-smog radiates out of many sources onto our cell bodies!

This is remedied by creating bioresonance. In this way,

J. Kirschvink of the California Institute of Technology (Caltech) in Pasadena, has tracked down, that a person has a verifiable and measurable physical receiver for electro-smog in magnetite crystals! Around 5 million magnetite crystals per 1 gram of brain cells is located in the head. There is sufficient sensitivity to prove the harmful effect of electro-smog!

electro-smog vitalises and the user is supplied with a cell-energy supercharging. The positive effects are known from medicine and are well scientifically grounded.

Scientists in Switzerland, together with scientists and experts from physics, health and medicine have succeeded to develop a magnetite-mineral mix and incorporate this into a Chip. This is charged thanks to the momentum from by a self-developed irradiation technology. Now any electro-smog is vitalised to become a bioresonance radiation.

Yes, radiation - but preferably vitalised!

Testing evidence and measurements

Example: subject was extensively measured in an appropriate laboratory both before and after the application of an E-Chip! The subject was male, 46 years old.

The picture on the left shows 39% health parameter in the body's condition prior to the use of the chip, whereas on the right, the condition with the chip, there is a health parameter of 68%.

The spline map shows the electrical activity of the brain. Without the chip, on the left, very tense. On the right, with the chip, significantly more balanced.

The gerontological curve shows - without chip - as a „biological age“ 49 years, after the 15-minute application of the chip one of 40 years („rejuvenation effect“).

Conclusion of the Health Campus at St. Elisabeth University

„With these test subjects we could once again show that the autocorrelation IVG, neurodynamic matrix, the biodynamic age, the spline chart brain activity, the health index and further values have improved on average by over 80%. This, after 15 minutes of using the Chip on a mobile phone!

The **i-like E-Chip** is scientifically monitored by the Health Campus at St. Elisabeth University, the Centre for New Technologies in Omsk, Russia and the Transfer Institute for Health and Development at Steinbeis University.

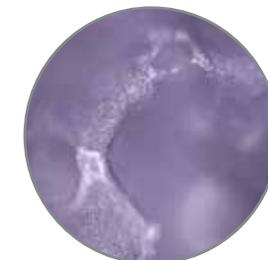

Via the Emoto laboratory (Hado Life), an energy measurement was carried out with the Meta-Converter and water. In order to do this, a neutral water (see below, osmosis water) was placed in a glass for one hour on a mobile phone with an E-Chip. The result is absolutely amazing and shows what a wonderful change in frequency the i-like Chip can achieve.

Testing evidence and measurements

Example: osmosis water was vitalised with the chip from i-like. The result is amazing!

Prior to the application, without a Chip.

After an hour, with a Chip.

The measurement by the Emoto laboratory (Hado Life) shows what positive frequency changes can be achieved with the chip.
